POPULATION PROJECTIONS FOR THE CITY OF EDMONTON
1982 - 2000

By Cabinet's Annexation Order, the City of Edmonton should "continue to maintain approximately 75% of the Metropolitan Region's population...". The estimated population for Edmonton Metropolitan Region in 1981 was 716.1 thousand, and for the City in the same year, 521.2 thousand, which amounts to approximately 73%. The 1982 annexation is intended to keep the City's share in this range. In order to monitor, and to aid the implementation of the Cabinet's Order of a 75% share, it will be necessary to perform population projection for the Region as well as for the City. At present, only crude future population estimates for the Region are available, indicating between 1.2 and 1.3 million people at the turn of the century.

For the City of Edmonton, projections were performed by the Planning Department, according to three different scenarios. The different assumptions relate exclusively to migration, as fertility and mortality rates are not expected to vary dramatically from the present rates. Past estimates of net-migration for the City are indicated in Table 1. At the same time, it should be noted that while overall net-migration seems to be positive (more in-migrants than out-migrants), the balance of migration between Edmonton and the rest of Alberta may be negative. Figures from the 1976 census indicate that Edmonton experienced a net loss of over 6,000 people who moved to elsewhere in Alberta in the period 1971 till 1976 (see Table 2). Similar conclusion must be drawn from more recent figures of the Alberta Bureau of Statistics. For 1980, for example, Alberta gained over 56,000 net migrants (see Table 3), while the City gained apparently only about 8 thousand (less than 15%). It seems reasonable to assume that while many immigrants to Alberta settle, at least initially, in Edmonton, there is a substantial number of persons who leave Edmonton for the rest of Alberta. Amid these observations, the three developed scenarios should provide a safe range within which Edmonton population could be expected to grow.

The economic outlook and background to the present forecasts lean heavily on the planned establishment of new projects within the City or in its close vicinity (see Table 4). This appears in contrast with the slow economic growth in other provinces. Further, it should be noted that, within Alberta, Calgary has probably passed its peak in terms of offering new jobs, and major projects in Fort McMurray and Cold Lake are either completed, or stopped. This, contrasted with the broad economic base of Edmonton, offers the conclusion that influx of blue-collar workers with their families will continue into the City.

The three scenarios vary basically on the magnitude of labour in-migration and on the migration balance between the City and the rest of Alberta. The

proposed figures of future net-migration attempt to provide a compromise between past trends (Table 1) and estimates of future net-migration, calculated by Electric Utility Planning Council of Alberta (Table 5). The latter estimates are based on observed past relationship between migration and the cost of economic projects. The projects and their cost, upon which the present EUPC forecast is based are listed in Table 4.

All three scenarios assume annual net-migration for 1982 to be 7500. In addition to this, 9200 persons are added to the 1982 figure, representing the population in the annexed areas. The migration assumptions of the three scenarios are linked to the materialization of all projects in Edmonton and vicinity, listed in Table 4. The three forecasts exclude institutional population of Edmonton, which amounts to approximately 7000 persons.

The projection procedure is based on a modified computer program suggested by Lalu (1980) and Krishnan and Lalu (1980).

High Migration Case

Net-migration will continue to increase gradually up to 1985/86, due to relative well-being of Alberta and Edmonton in particular. Net-migration will stablize on approximately 11 thousand net-migrants per year from 1986 onwards. This figure represents 35% of expected in-migration to Alberta from the rest of Canada and the world, and zero net-migration between Edmonton and the rest of Alberta.

Low Migration Case

Net-migration will gradually decrease due to lack of economic opportunity in general and high cost of housing in Edmonton in particular. Migration balance between Edmonton and the rest of Alberta will become increasingly negative, although Edmonton will continue to attract migrants from the rest of Canada and the world. Net-migration for the City will reach 3500 in 1986. The same pessimistic scenario is projected onwards with the same figure for net-migration.

The Probable Case

With the gradual improvements of the economic situation through 1983, net-migration is expected to rise somewhat from the 7500 expected figure for the current and the next year. These figures include an estimated 1-2 thousand people that will leave Edmonton each year for places elsewhere in Alberta. By 1986, Edmonton will be receiving 20-25% of migrants forecasted by EUPC, and will continue to lose 1-3 thousand people annually for places elsewhere in Alberta. This will amount to an approximate 9 thousand net-migrants annually by 1986. The same scenario is projected onwards.

The graphical presentation of the three forecasts is presented, along with a forecast of the Urban Growth Strategy Group of the Planning Department, in the attached figure. The U.G.S. forecast includes all persons in Edmonton, while the General Research Services forecast refers to household population only. The exclusion of persons in institutions (approximately 7000) in the G.R.S. forecast is due to the assumption that this population is not subjected to existing regime of demographic rates.

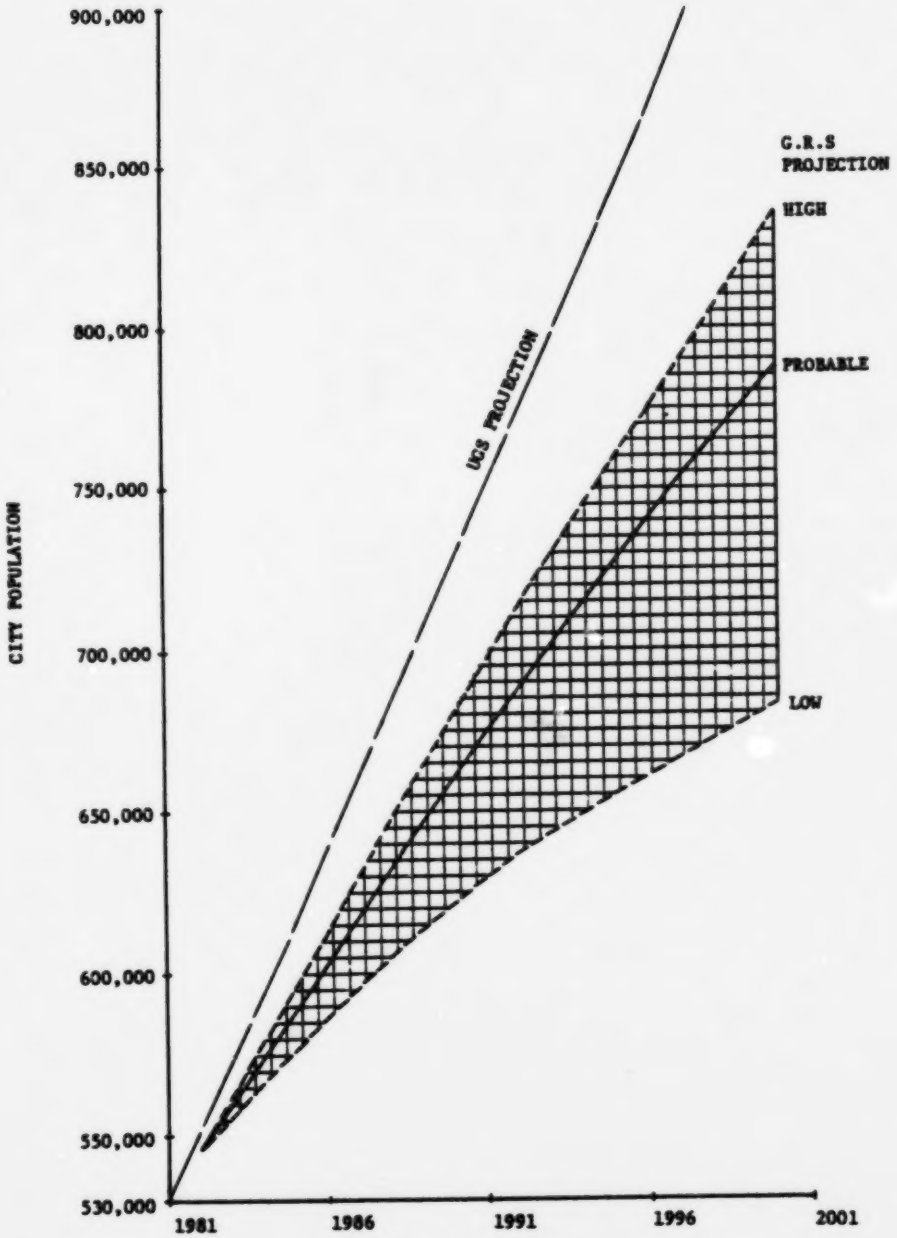
COMPARISON OF PROJECTED CITY POPULATION



NOTE: G.R.S. projection assumes 3500-11000 average annual net migration in to the City of Edmonton. This projection was prepared using a cohort-survival model applied to the existing 1981 City population.

U.G.S. projection assumes a higher annual net migration, sufficient to allow the City to maintain its existing 75% share of total regional population. This projection was prepared by extrapolating and factoring down the Alberta Bureau of Statistics' Series 5 projection for Census Division 11.
